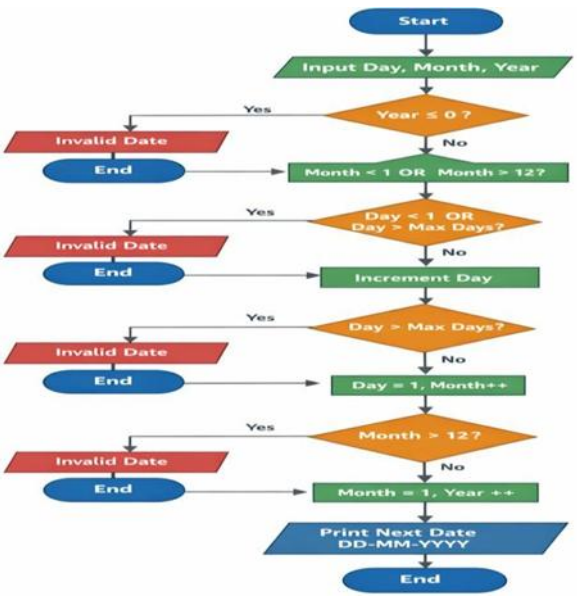
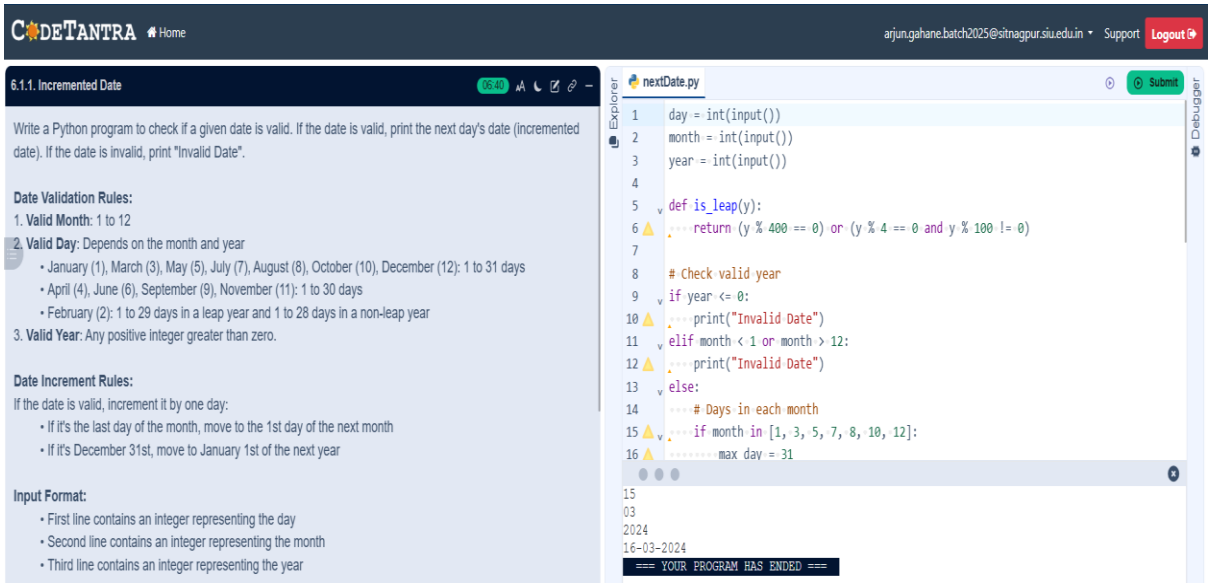
PPS 6.1.1

Algorithm

1. Start
2. Input day, month, year
3. If year ≤ 0 → print **Invalid Date**, stop
4. If month < 1 or month > 12 → print **Invalid Date**, stop
5. Determine max_days in month (use leap year for February)
6. If day < 1 or day > max_days → print **Invalid Date**, stop
7. Increment day by 1
8. If day > max_days → set day = 1, month++
9. If month > 12 → set month = 1, year++
10. Print date in DD-MM-YYYY format
11. End

Flowchart:





PPS 6.1.2

Algorithm

1. Start
2. Input `n`
3. Set factorial = 1
4. For `i` from 1 to `n` `factorial = factorial × i`
5. Print `factorial`
6. End

Flowchart:

6.1.2. Factorial of a Number

03:25

Write a Python program to calculate the factorial of a number n using loops.

Input Format:

- A single line containing an integer n.

Output Format:

- Print the factorial of the given integer n.

Sample Test Cases +

Explorer

factorialN...

Submit

Debugger

```python
num = int(input())

factorial = 1
for i in range(1, num + 1):
    factorial *= i

print(factorial)
```
